## Radio Science

**Do you want to publish  
a full length paper based  
on your URSI 2021 General  
Assembly paper in AGU's  
journal, Radio Science?**

The 34th General Assembly and Scientific Symposium (GASS) of the International Union of Radio Science (URSI) <http://www.ursi.org> is scheduled for 28 August-4th September 2021 in Rome, Italy.

The scientific program of the GASS is organized around the ten Commissions of URSI. The main objective of the GASS is to review current trends in radio research, present new discoveries and make plans for future research work. Papers will be presented on all aspects of radio science.

AGU and URSI are partnering to provide GASS authors with an opportunity to publish full length journal papers based on their GASS papers in a special section of the AGU journal, Radio Science.

Note that if you have chosen for your GASS paper to be indexed on IEEE-Xplore, the Radio Science paper must not be a simple copy of the GASS paper, but must incorporate substantive extensions. If you have submitted an extended abstract (which will not be indexed by IEEE-Xplore) then there is no such requirement.

**Submission opens:  
1 September 2021**

**Submission closes:  
1 May 2022**
